KESHAV SARDA

📍📍 Jaipur, Rajasthan, India

📧 EMAIL | 🔗 LINKEDIN | 🔗 GITHUB | 🔗 PORTFOLIO | +91 9707535127

🎯🎯 OBJECTIVE

Aspiring Data Analyst with a foundation in AI and ML. Skilled in Python, SQL, R, and Power BI. Passionate about transforming data into actionable insights and building innovative solutions that solve real-world problems.

🎓🎓 EDUCATION

B.Tech in Computer Science Engineering (AI-ML)-Samatrix.io — **CGPA – 8.76**

JECRC University, Jaipur, Rajasthan — *July 2023 – July 2027*

🛠️🛠️ SKILLS

- Python, R, C, C++, SQL (HackerRank Certified)
- Power BI
- Pandas, NumPy, Seaborn, Matplotlib, scikit learn
- Fluency in English, Hindi, Assamese

💼💼 EXPERIENCE

- **Data Science Intern**
  Codveda Technologies | Remote — **Jul 2025 – Aug 2025**
  -> Developed ML models to predict house prices using property features like location, size, and condition on a dataset of 4,600 records.
  -> Applied logistic regression and statistical data analysis to improve prediction accuracy.
  -> Tools: Python, scikit-learn, Pandas, GitHub
- **Data Analyst Intern**
  Samatrix Consulting Private Limited | Remote — **Jun 2025 – Jul 2025**
  -> Performed EDA on graduate school admissions data to identify key admission factors.
  -> Built predictive models using Python, created visualizations with Seaborn/Plotly.
  -> Documented findings and presented them through visual dashboards.

💼💼 PROJECTS

Google Play Store Review Analytics

Dec 2024

- Built real-time analytics dashboards for installs, ratings, and reviews.
- Created choropleth maps, heatmaps, and time series charts using Plotly and Seaborn.
- Used SQL for complex filters and correlation analysis.

Pizza Sales Analysis

Jan 2025

- Analyzed pizza sales data to discover top-selling items and order patterns.
- Created Power BI dashboards for tracking daily to monthly sales.
- Performed sales forecasting using time-series analysis

Predicting Graduate School Admissions

Jully 2025

- Developed a machine learning model to predict graduate school admissions based on academic and other criteria.
- Utilized Python and Jupyter Notebook for data preprocessing, exploratory data analysis, model building, and evaluation.

Predicting-House-Price-Of-USA

Aug 2025

- Predicted house prices using ML models trained on 4,600+ property listings with features like condition, size, and location.
- Tools: Python, Logistic Regression, Pandas, GitHub

📜📜 CERTIFICATIONS

- Tata - Data Visualisation: Empowering Business with Effective Insights Job Simulation
- Deloitte Australia - Data Analytics Job Simulation
- Data Analysis Using Python – Samatrix.io
- SQL (Intermediate) – HackerRank
- Internship Certificates –NullClass
- Data Analysis Intern– Samatrix.io
- Data Science Intern – CodVeda Technologies
